Epigenetics

New England Biolabs has called upon its 35 years of expertise in enzymology to develop a suite of validated reagents for epigenetics research. This line of easy-to-use EpiMark® kits simplifies DNA methylation and hydroxymethylation detection and analysis, as well as ChIP, histone and nucleosome analysis. Independently applicable, individual epigenetics reagents also complement the EpiMark® kits.

All cytokines and growth factors are produced and bioassayed in-house, ensuring the highest standards of quality and consistency.

- Most products are free of tags or additional amino acids, and many are produced in mammalian cells to maximize natural conformation and glycosylation – especially important for successful in vivo applications.
- Multi-milligram quantities always available for large scale in vivo experiments.
- Validation includes the use of CST antibodies to assess downstream signaling events.

Molecular Biology Enzymes

USB enzymes, including polymerases, nucleases, ligases, and DNA binding proteins, are used for a variety of molecular biology applications such as amplification, nucleic acid manipulation, and DNA sequencing. USB has more than 30 years of enzyme production experience, and all enzymes are tested in standard functional assays and certified free of nucleases and proteases.

DGGEK-2401: DGGE Kit, 2 dual cassettes, 4-place. SPECIAL BUNDLE VALUE includes Mini-Power Supply and Mini-Peristaltic pump .

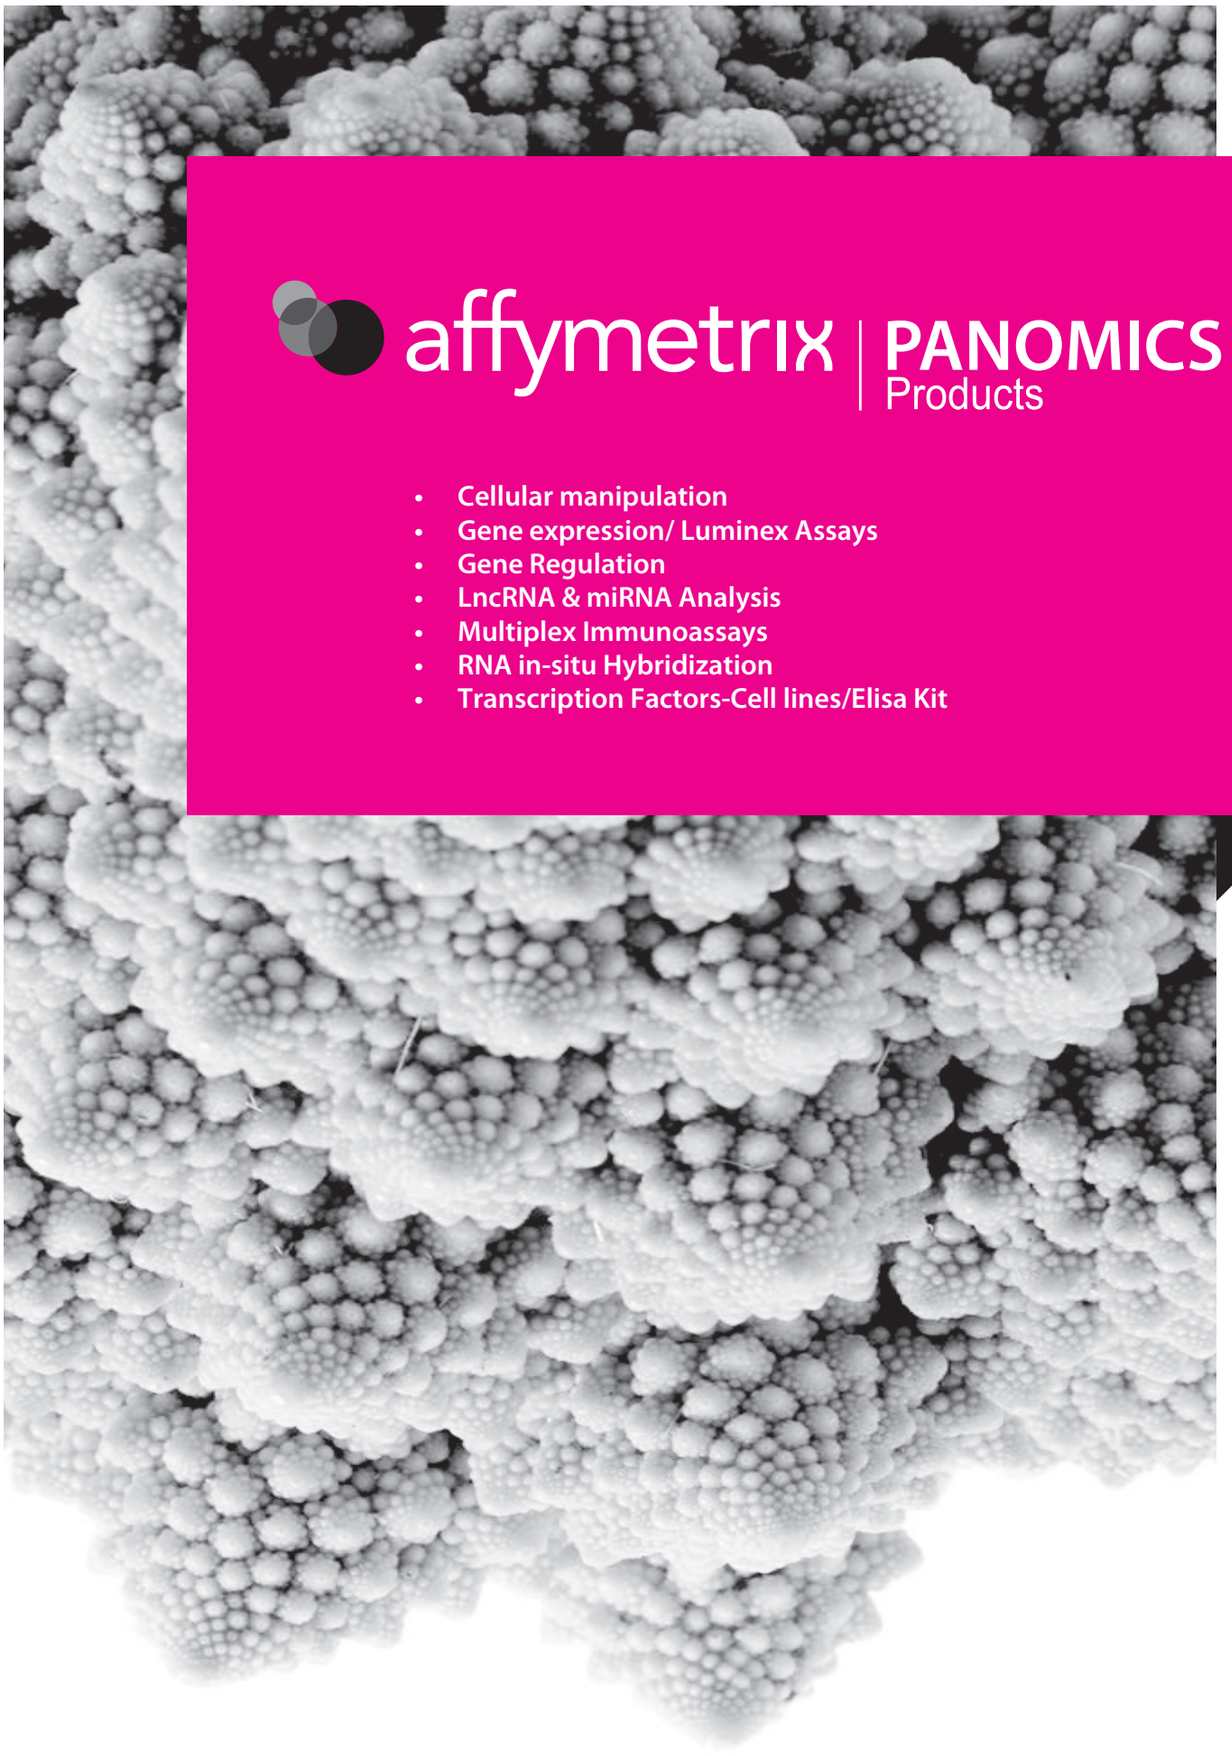

For detecting single base changes and polymorphisms in genomic, cloned and PCR amplified DNA. DGGE is ideal for screening samples for genetic mutations.

C.B.S. SCIENTIFIC has designed five different sized DGGE System Kits which are reliable and easy-to-use. The DGGEK-1001 is a smaller 2 gel system and features one dual gel cassette and buffer displacement tank. The DGGEK-2001 features two single gel cassettes. The DGGEK-2401 has the same buffer tank as the DGGEK-2001 but features two dual gel cassettes, for a capacity of 4 gels per run. Also available is the DGGEK-4001 which has a larger buffer tank and four single cassettes. Finally there is the DGGEK-4801 which features the larger buffer tank and four dual cassettes enabling the researcher to run up to 8 gels simultaneously.

ACTIVE™

Oligos from ILS

Active Oligo Cards

For Researchers

As with a phone call, a single purchase give the ability to prepay orders, requiring only a single PO or credit card transaction from the pruchasing group. No more purchase order delays and redundant paperwork required. Enjoy the full benefit of the grant dollars earned by establishig OligoCard credit near the end of the grant term.

For Purchasing Professionals

Consolidate the ordering of products into one easily traceable and secure system. All of the orders from a lab or group of labs cane be tracked and processed far more efficiently. Establishing the balances on each individual card allows for easy enforcement of credit limits.

Features :

Each card has a unique number and PIN
All transactions are processed over a secure connection
All cards only applicable for desalted oligos @ 25 nmol

Cat. No.	Product	₹

The Oligo Card is a simple and easy solution to streamlining the purchasing process

Oligonucleotide

Desalted DNA Oligos

- At no extra Charge
- Every Oligo is deprotected and desalted to remove small molecules impurities
- Oligos are quantitated twice by UV Spectrophotometry to provide an accurate measure of yield.
- Quality control for each primer by MALDI-TOF MASS spec.
- Delivery: 4 - 6 Business days

Oligonucleotide Purification

- Purification is recommended for all oligos greater than 40 bases in length and for many modified oligos
- For demanding applications such as multiplex PCR, cloning, Mutagenesis or antisense /RNAi methods, additional purification will significantly improve Oligonucleotide performance
- Every purified oligos upto 60 bases in lenght receives by capillary eletrophorosis to document final purity.
- Delivery 15 - 20 Days.

RNA Interference

RNA has been used for almost fifteen years to reduce (or interfere with) expression of targeted genes in a variety of systems. Historically, these methods have been called post transcriptional gene silencing (PTGS) in plants, quelling in fungi and RNA interference (RNAi) in higher organisms. Although originally thought to require use of long double-stranded (DS) RNA molecules, the active mediators are now known to be short DS RNAs. Short single-stranded antisense RNA molecules were demonstrated to be effective inhibitors of gene expression over a decade ago but are susceptible to degradation by a variety of nucleases and are therefore of limited utility without chemical modification. DS RNAs are surprisingly stable and, unlike single-stranded DNA or RNA antisense oligos, do not need extensive modification to survive in tissue culture media or even within living cells.

Short interfering RNAs are naturally produced by degradation of long DS by RNase III class enzyme. While these fragments are usually around 21 bases long, synthetic DS RNAs of a variety of lengths (ranging from 18 bases to 30 bases) can be used to suppress gene expression depending on the system studied. These short DS RNAs are bound by the RNA Induced Silencing Complex (RISC), which contains several protein components including a ribonuclease which degrades the targeted mRNA. The antisense strand of the DS RNA directs target specificity of the RISC RNase activity while the sense strand of an RNAi duplex appears to function mainly to stabilize the RNA prior to entry into RISC and is degraded or discarded after entering RISC.

RNAi pricing includes RNase-Free HPLC purification with a >85% minimum purity guarantee (for unmodified oligos) verified by capillary electrophoresis (CE). In addtion, each oligo is examined by mass spectrometry. RNAi sequences must be 100% complementary with up to a 3 base overhang.

Mini-peristaltic pump

MPP-100	Mini-Peristaltic Pump for Gradient Gel Casting. Variable flow mini-pump, 120V, 60HZ; 9 or 12V battery. Variable flow Mini-Pump is a bidirectional, self-priming peristaltic pump for precise low-flow deliveries. The squeezing action of the rollers on the tubing progressively moves fluid through the tubing in advance of the rollers, resulting in a peristaltic pumping action. The flow is proportionate to the speed of the pump head and the inside diameter of the tubing, both of which can be varied. A variable speed flow control and 5 different sized tubing assemblies provide fine resolution with a wide range of flow rates	40,518.00

Tadvanced Thermal Cycler

Tadvanced Thermal Cycler

The TAdvanced thermal cycler is based on a new technology which is, among other things, characterized by very powerful electronics. The new device thus offers superior heating and cooling rates that helps achieve ramping rates with a sample block made of aluminum which are normally seen only with the highest quality instruments using silver blocks. The new electronics include USB- and Ethernet-ports as communication interfaces and a 7'' color touch screen with completely redesigned, clearly structured user software.

- **Rapid** : High-speed sample block with unbeatable ramping rate of 6°C/s or 8°C/s (silver block)
- **Excellent** : absolute temperature uniformity and no over- or undershooting for maximum reproducibility
- **Exact** : Accurate adjustment of the gradient temperature profile with the "Linear Gradient Tool"
- **Smart** : Innovative design with high-quality components "Made in Germany"
- **Quiet** : Low-noise operation thanks to the latest technology
- **Comfortable** : 7" touch screen with intuitive software interface
- **Flexible** : Quick assignment of rights for different user groups

TProfessional Basic

Professional technology for routine applications

The TProfessional Basic Thermocycler features a gold anodised 96 well block or an anodised 96 well XL block for extra large volumes up to 100l. The gold anodised 96 well block is designed for standard applications whereas the XL block is especially developed for special protocols which require large volumes like emulsion PCR for new generation sequencing or bisulfide conversion of DNA. Both block types offer an excellent temperature uniformity and if desired the gradient function for quick optimization of new protocols. The TProfessional Basic provides full functionality of easy Spreadsheet & Graphical programming as well as quick start of the last five programs.

TProfessional Thermocycler

Premium Performance with maximum flexibility

The TProfessional Thermocycler is equipped with a quick block exchange system. It offers five different block modules for conventional PCR applications that can be exchanged in less than 10 seconds. Additionally by the TOptical block module the TProfessional can be upgraded for Real-Time PCR. The block exchange is as easy as with standard block modules and can be carried out within a few seconds. The TOptical module is optionally available with gradient function for the quick optimisation of new primer pairs.

TProfessional Standard

with high speed silver block for advanced demands

- Linear gradient • High speed silver block
- Large graphical display • Quick block exchange
- Network capability

The TProfessional Thermocycler is inspired by the wish to simplify molecular biology research. It combines high speed cycling with ultimate ease of programming.

Programming of gradients

Easy setup of temperature gradients

Gradient steps are either defined in a graphical screen, showing the individual temperature for each row or in a linear gradient screen were temperature gradient with linear increments can be defined. Alternatively, the temperature gradient can be entered directly in the programming spread sheet.

TPersonal Thermocycler

The small Thermocycler with the maximum power

- Fast ramping rates thanks modern Peltier technology
- Small footprint and high sample capacity
- Three different block formats
- Enhanced memory structure
- Network capability

High speed thermocycling

Using the latest in Peltier technology the Tpersonal achieves excellent heating and cooling rates. Due to a new generation of Peltier elements it became possible to cool with the same speed as heating. Thus the Tpersonal provides precise reaction conditions and short run times.

Flexibility

Three different TPersonal versions are available. The TPersonal 48 holds 48 x 0.2 ml tubes, strips or 48 well microplates. This capacity outperforms any other cycler in this segment. The 20 well version is designed for 0.5 ml tubes. Maximum flexibility provides the combi block, which can hold both 0.2 and 0.5ml tubes.

Fits on any bench

The TPersonal is a highly integrated thermocycler. With a footprint of only 22 x 31 cm it occupies minimum bench space. Still it provides the speed and half the capacity of much more expensive high end thermocyclers. Thus the TPersonal is the perfect personal assistant.

T Professional TRIO Thermocycler

three thermocyclers in one for maximum flexibility & high sample throughput

The TProfessional TRIO Thermocycler offers three independent blocks in one housing thus different independent protocols can be run at the same time. This makes the TProfessional TRIO Thermocycler the perfect instrument for laboratries with the demand for high flexibility and the need to often optimise new PCR protocols. With a maximum capacity of 3 x 48 wells the TProfessional TRIO also offers high throughput in parallel. The TProfessional TRIO Thermocycler is available in three different block versions for 48 x 0.2 ml tubes, 30 x 0.5 ml tubes or as combi block version for 48 x 0.2 ml or 18x 0.5 ml tubes.

Smart lid technology

The TProfessional TRIO Thermocyclers heated lids prevent condensation and provide reliable contact between samples and thermoblock. The lids are powered by Biometra's well known Smart Lid technology with integrated clutch mechanism which automatically limits the lid pressure applied to the plasticware and thus saves tubes from damage.

In addition by formation of a homogeneous air cushion an even temperature distribution between the samples is ensured, significantly improving temperature uniformity. This also ensures reproducible conditions amongst different PCR runs.

Trobot

Specially designed for integration in robotic environments

Motorized heated lid
Unique: Motorized plated lifter
Small footprint, external controller

The TRobot is designed to fulfill the special requirements for integration in an automized environment. Because space is very limited in robotic stations, the TRobot block has been separated from the external controller / power unit. Thanks to the motorized lid, no manual interaction is necessary.

Removing plates from the block is the major obstacle to automation. Due to their tight fit, plates tend to stick to the block after cycling. If the robotic arm is not able to remove the plate from the block, the whole system halts. To solve this problem, the TRobot shortly lifts the plates from the block as the lid opens. The plates can then be easily removed by the robotic arm.

Transilluminators

UVstar Transilluminators for UV Fluorescent Stains

Biometra UV transilluminators feature a uniform and bright illumination based on modern control electronics. The exclusive application of high-grade filter glass provides for excellent documentation results with lowest background signal. The great illumination uniformity allows the reliable quantification of electrophoretically separated fluorescent samples.

UV to white light converter plate

Alternatively to the use of a white light table a converter plate can be applied at the top of a UV transilluminator. The converter plate converts the UV light to visible light and thus economically extents the application scope of all UV table models to the visualization of coloured dyes.

Sample Compression Technology™ - Accuracy & Precision

Reliable Protein Measurements

Reliable microvolume protein measurements are a challenge for most researchers due to a lack of surface tension and a complex matrix of components in the samples. Implen's Sample Compression Technology ™ provides a reliable measurement geometry for such challenging samples. A capillary film is formed between two quartz surfaces with each sample eliminating the need for surface tension.

No Evaporation

Samples are completely enclosed in a stable micro-environment during the entire measurement process. Evaporation and contamination of samples are reduced to a minimum. Even stable kinetic measurements in small volume samples are possible as well as the determination of samples in volatile organic solvents.

Smallest Volume

Microvolume samples are measured in an advanced reflection mode on the NanoPhotometer®. With 0.3 µl minimum sample volume the NanoPhotometer is the instrument with the lowest volume requirement available!

GeneTitan

affymetrix
Biology for a better world

Next Generation Microarray System with ease of customization

GeneTitan® Multi-Channel (MC) Instrument and Affymetrix' proven array plates in 96- and 384-array layouts are the first to provide a hands-free, automated solution for monitoring gene expression and genome-wide SNP genotyping.

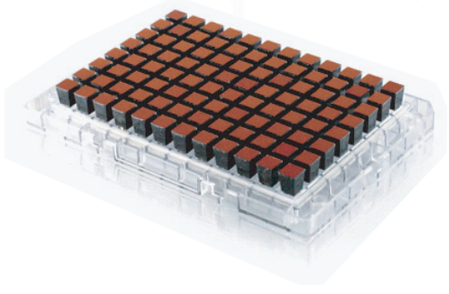

GeneTitan Multi-Channel (MC) Instrument automates array processing from target hybridization to data generation by combining a hybridization oven, fluidics processing, and state-of-the art imaging device into a single bench-top instrument.

The imaging device in GeneTitan MC Instrument uses an external, high-intensity xenon lamp and dual excitation and emission filters to capture images from array plates for use in genome-wide expression and genotyping studies.

Key benefits

- **Easy –** Designed for operators with minimal microarray experience.
- **Flexible –** Supports gene expression on 16-, 24-, 96-array layouts and genotyping studies on 96- and 384-array layouts.
- **Accurate –** Delivers high-quality, consistent data every time.
- **Efficient –** Condenses hands-on processing time to as little as 30 minutes, images an array in less than 5 minutes, and operates unattended overnight.

Janus NGS Express

PerkinElmer
For the Better

Your Complete Solution for Next Generation Bench top Sequencing Library Preparation

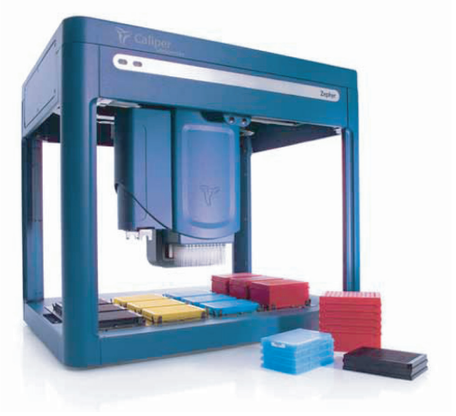

The NGS Express is a fit-for-purpose workstation that performs specific DNA library preparation protocols used by customers doing Next-Generation Sequencing (NGS). Unlike traditional multipurpose liquid handlers, the NGS Express is designed to provide an 'out-of-the-box' solution for customers seeking to automate NGS sample preparation.

Protocols have been developed and extensively tested for performance with actual samples, which eliminates or significantly reduces the need for customers to write their own protocols. As such they can easily execute the pre-written protocols through the JANUS Application Assistant, making expertise in Win PREP unnecessary.

Sample preparation is the key to high quality data for nucleic acid sequencing. Protocols for bench top sequencers are complex multi-step methods requiring precise execution. Errors in library preparation lead to loss of precious samples and wasted reagents. Consider automation to achieve more uniform library preparations. With automation, you can increase the quality of your NGS libraries and lower your overall costs, while eliminating tedious repetitive procedures.

Mantra Quantitative Pathology Workstation

(Visualize, Analyze, Quantify and Phenotype Immune Cells In-Situ)

Mantra™ quantitative pathology workstation with inForm® image analysis software enables easy visualization, quantification and phenotyping of multiple types of immune cells simultaneously in intact FFPE tissue sections for cancer immunology research.
Mantra is a compact workstation where a researcher can phenotype immune cells in situ in solid tumors using multiplexed biomarkers. Unlike existing flow cytometry and next generation sequencing methods which can phenotype and quantify immune cells in homogenized samples, Mantra similarly does this using images of FFPE tissue sections, while maintaining tissue architecture and morphology. This provides spatial information which could lead to a better understanding of the role and types of immune cells within both the tumor and the tumor microenvironment so that new cancer immunotherapy treatments may be identified and researched.
