

About Promega

With a portfolio of more than 3,000 products covering the fields of genomics, protein analysis and expression, cellular analysis, drug discovery and genetic identity, Promega is a global leader in providing innovative solutions and technical support to life scientists in academic, industrial and government settings.

Promega products are used by life scientists who are asking fundamental questions about biological processes as well as by scientists who are applying scientific knowledge to diagnose and treat diseases, discover new therapeutics, and use genetics and DNA testing for human identification.

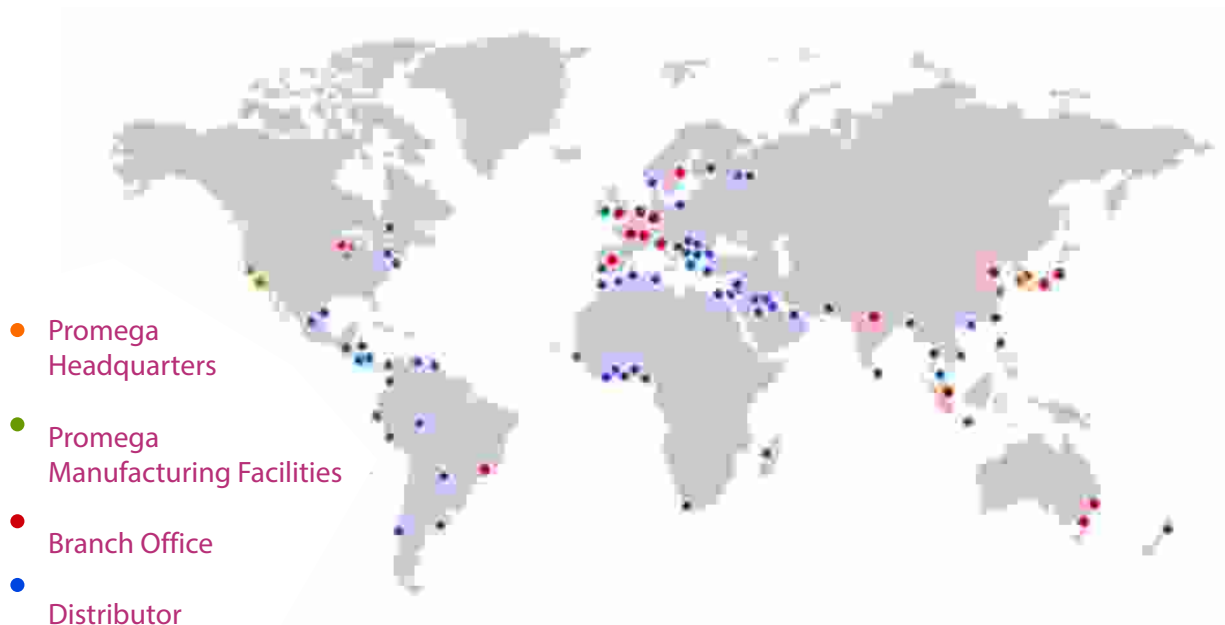

Promega holds significant intellectual property rights and licenses in several key areas that form a foundation for its diverse portfolio including:

- Bioluminescence, including engineered luciferases, luciferase reporter vectors and luciferase substrates.
- Short tandem repeat (STR) detection for STR-based cell line authentication, human identification, cell and tissue characterization, and mixed sample detection.
- HaloTag® protein labeling and capture technology.

Originally, founded in 1978 in Madison, Wisconsin, USA, Promega has branches in 16 countries and more than 50 global distributors serving 100 countries.

A cornerstone of Promega business practice is supporting customers, community and employees.

Two Sensitive Reporters. One Extraordinary Assay.

Nano-Glo[®] Dual-Luciferase[®] Reporter Assay

A new reporter partnership with the *Sensitivity, Flexibility* and *Control* you need to detect small changes in expression and measure them with confidence. Improved firefly chemistry and the small, sensitive NanoLuc[®] luciferase make this the most powerful dual-reporter assay available.

- Greater sensitivity at low expression levels.
- Your choice of two primary reporters.
- Better control, more reliable data.
- Less interference with natural biology.
- Improved reagent stability simplifies storage options.

However the road curves, we're here to help you succeed

GoTaq® Real-Time PCR Systems enable sensitive detection for earlier quantitation of low- and high-copy-number targets over a broad dynamic range.

Rely on robust systems resistant to a wide range of PCR inhibitors. Compatible with both fast and standard cycling methods, they offer exceptional room temperature stability for easy setup.

Circulating cell free DNA (ccfDNA) was purified with Maxwell® RSC ccfDNA Plasma Kit. Three genes with variable expression levels were successfully amplified with GoTaq® qPCR Master Mix with BRYT® Green dye.

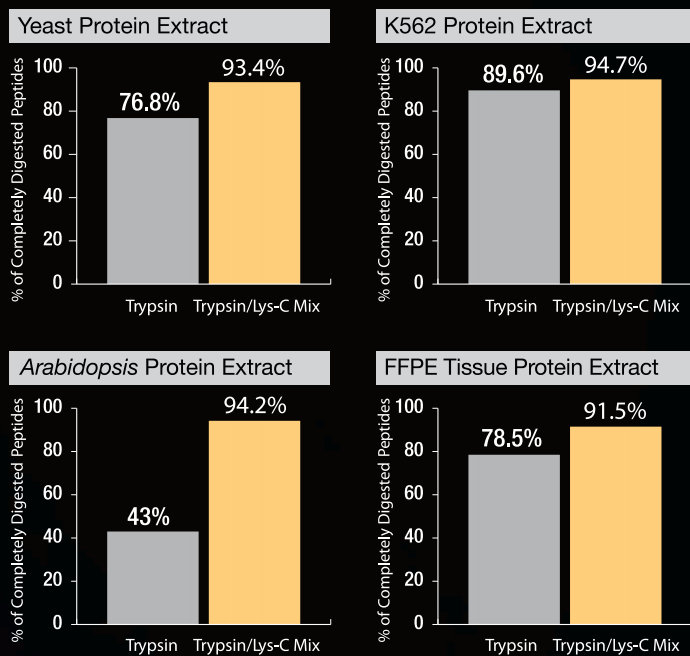

Expression of β-actin HPRT and B2M was analyzed from ccfDNA purified with the Maxwell® RSC ccfDNA Plasma Kit, in singleplex and triplex using the GoTaq® Probe qPCR Master Mix.

Trypsin/Lys-C Mix

See what you've been missing

Trypsin/Lys-C Mix, Mass Spec Grade enables more complete digestion than Trypsin alone.

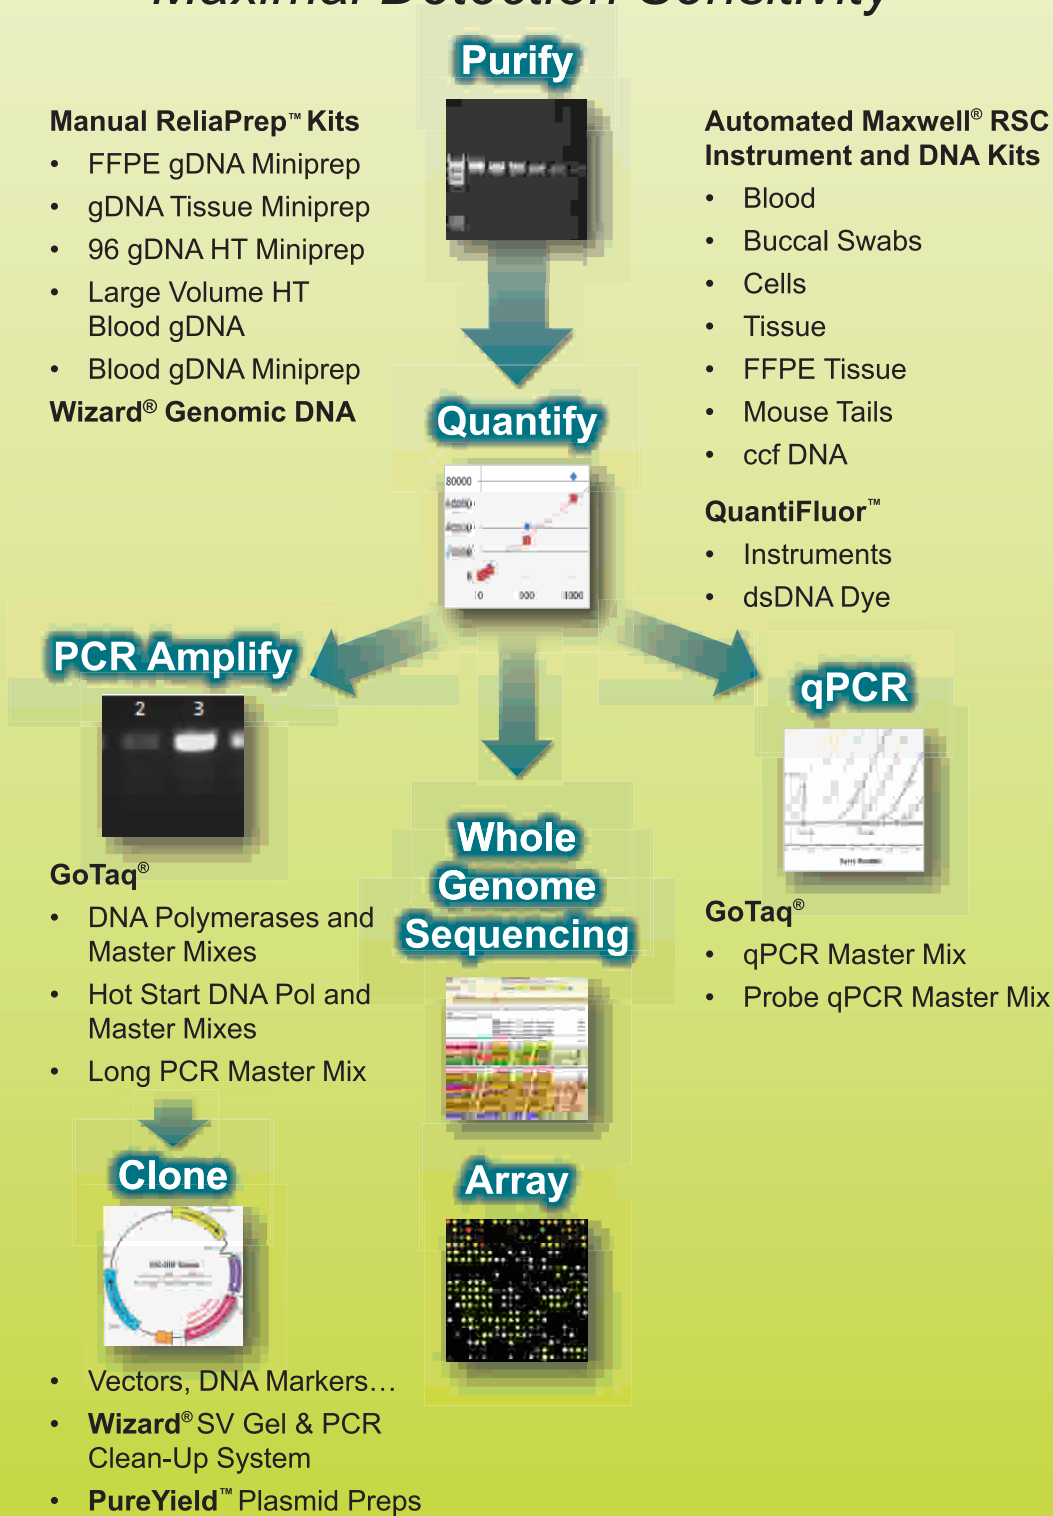

Trypsin/Lys-C Mix, Mass Spec Grade, misses fewer cleavage sites than Trypsin alone. All the digests were performed overnight at 37°C.

The Trypsin/Lys-C Mix enhanced activity and tolerance to trypsin-inhibiting contaminants means fewer missed cleavages. The result is more peptides and better mass spectrometry data.
