Hands-on Training on Integrative Taxonomy and Phylogenetics under Scheduled Caste Sub-Plan (SC-SP)

Dates: 19 - 28 February 2025

Background Information

Biodiversity plays an essential role in maintaining ecological balance, providing food, and supporting livelihoods worldwide. India, renowned as one of the megabiodiverse countries, harbors a significant number of endemic species. The aquatic biodiversity, notably fisheries resources, is crucial as it offers protein-rich food, sustains livelihoods, and generates foreign exchange. However, the decline in biodiversity due to anthropogenic factors is alarming.

Integrative taxonomy, which combines classical and molecular approaches, has revolutionized the field of taxonomy. Classical taxonomy, based on morphological characteristics, has historically underpinned our understanding of species diversity. Yet, it sometimes struggles with issues like phenotypic plasticity, where organisms' appearances vary widely under different environmental conditions. Molecular techniques, such as DNA barcoding developed over the past three decades, complement traditional methods by resolving taxonomic ambiguities, uncovering cryptic species, and revealing evolutionary relationships that morphological methods alone might miss.

Despite India's diverse agro-climatic zones and its status as a mega-biodiverse country, less than half of its biodiversity has been characterized at the molecular level. Advanced methods like next-generation sequencing now enable species identification directly from environmental samples, enhancing our ability to monitor biodiversity comprehensively. The training program "Integrative Taxonomy and Phylogenetics" is specifically designed to update researchers on the powerful combination of classical and DNA sequence-based species delimitation techniques. This integrative approach is crucial for accurately cataloging India's rich biodiversity and implementing effective conservation strategies.

Course Content

- Philosophy of Taxonomy
- Tools in Classical Taxonomy
- Species Concept
- Basis of Molecular Evolution
- Concept of Molecular Clock and Genetic Distance
- Molecular Taxonomy
- Species Delimitation Methods
- Nucleotide Substitution Models
- DNA Barcoding
- DNA Sequence Analysis
- Molecular Phylogenetics
- Phylogenetic Tree Reconstruction Methods
- R-software for Phylogenetics
- Concepts of Metabarcoding
- Global Databases for Taxonomy

Intake capacity

20 participants

Eligibility

Masters and PhD Scholars of the SC category

Travel Allowance & Accommodation

Participants will be provided to and fro train fare of Sleeper III Tier tickets by the shortest route. In case of travel by air, the difference will be borne by the participants. Free lodging and boarding will be provided.

How to apply?

Application is in the following Google form which needs to be filled on or before 10 February 2025.

Organized by

Fisheries Resources, Harvest & Post-Harvest Management Division

ICAR-Central Institute of Fisheries Education, Panch Marg, Versova, Mumbai - 400061

Course Director

Dr. B. B. Nayak Head & Principal Scientist Fisheries Resources, Harvest & Post-Harvest Management Division email: nayakbb@cife.edu.in

Course Coordinators

Dr. Annam Pavan Kumar Sr. Scientist, FRHPHM Division Email: pavankumar@cife.edu.in

Dr. Asha T. Landge Principal Scientist, FRHPHM Division email: <u>ashalandge@cife.ed</u>u.in

Course Co-coordinators Dr. Sangeeta Mandal Dr. Monalisha Devi Mr. Dayal Devadas

Dates to remember

Last date of submission of application

10 February 2025

Communication of selection 11 February 2025

Confirmation by candidate 12 February 2025

For any other details, please contact: Dr. B. B. Nayak, PS and Head, FRHPHM division, email ID: nayakbb@cife.edu.in

ICAR-Central Institute of Fisheries Education (Deemed University) Mumbai www.cife.edu.in
