Introduction

India is bestowed with enormous aquatic resources in the form of rivers, lakes, reservoirs, ponds, tanks, *beels* oxbow lakes, backwaters and inland saline waters. In addition to that fish and crustacean biodiversity in Indian ecosystems is also huge. Fish culture has emerged as one of the high earning and commercial venture with lot of expansion opportunities.

Most of the potential water bodies of the country are either unutilized or not properly utilized, hence the necessity of trained manpower is evident for proper utilization of untapped resources and for scientific farming in those water bodies in which aquaculture is already carried out. In view of this, a training programme will be organized on “Basics in aquaculture” by Division of Aquaculture, ICAR-CIFE, Panch marg, Off Yari Road, Versova, Andheri (W), Mumbai from 22nd to 28th January 2019

ICAR-CENTRAL INSTITUTE OF FISHERIES EDUCATION

ICAR-CIFE is a leading fisheries university having a rich curriculum with a wide range of activities in academics and research. The institute continues to be a player in national fisheries education over the years. ICAR-CIFE has emerged as a center of excellence for higher education in fisheries and allied disciplines. It offers masters and Ph.D. programs in 11 specialized disciplines of fisheries. It also offers entrepreneurship development programs, certificate courses and several short duration skill development programs at Mumbai and its four centers. The institute is located in Mumbai, the financial capital of India is well connected by all modes of transport. .

Division of Aquaculture is carrying out Masters and Ph.D courses and also involved in research, training, extension and consultancy. The research and extension is carried out to develop technologies and transfer them to various stakeholders.

The course is aiming at imparting basic

knowledge in aquaculture to the entrepreneurs and beginners. The concepts of site and species selection, stocking, soil and water quality management, nutrition and disease management and technological advancements will be useful for the beginners.

Contents

- Selection of site and candidate species
- Farm design and Engineering
- Pre-stocking and post stocking management
- Nutrition and disease management
- Soil and water quality management
- Aquaponics and biofloc technology
- Cage and pen culture
- Seed production, hatchery management and live feed production
- Economics and bankable projects
