

Improved Common Carp Dissemination from ICAR-CIFE Rohtak Centre

ICAR-CIFE Rohtak Centre is proud to have disseminated 2 tonnes of Genetically Improved Broodfish of Common carp *Cyprinus carpio* (F1B1.24) from its Nucleus Breeding Centre (NBC) to various farmers who will serve as multipliers in Haryana State. This was done in coordination with the State Fisheries Department. The broodfish have the potential to produce 200 million common carp seeds. This is expected to boost the productivity of inland saline pond aquaculture of common carp this breeding season.
